Please read the instructions and look at the pictures before installing the bracket. This mounting bracket consists of four parts: Part 1 - support arm. Part 2 - mounting plate. Part 3 - mounting arm.

1. Press the enclosed Gap Opener (Spaltöffner) into the upper gap between the storage compartment and the center console. Press the Gap Opener (Spaltöffner) upward + forward so the storage compartment comes off on the top side. Repeat the procedure with the Gap Opener (Spaltöffner) on the lower gap between the storage compartment and center console. Pull out the storage compartment. Note the oval shaped hole at the bottom of the space where the storage compartment was.

2. Press the support arm vertically into the space so that the knob at the end goes into the hole. Note that the foam should be on the right side. Turn the support arm clockwise so the knob locks it into place. Thread the enclosed screws through the holes in the mounting plate and screw into the support arm.

3. Screw the mounting arm into place in the pre-drilled holes.

4. The mounting bracket is in place.
