Console mount

Please read all of the instructions and look at the pictures before attaching the ProClip mount. It is important to install the mount first: any device holder & equipment is to be attached after the mount is in place. This mount consists of two parts: a mounting bracket and a mounting plate. The mounting plate can be attached at any desired angle.

1. Hold the mounting bracket in the position where it is to be installed. Place the mounting plate on top of the mounting bracket and turn it into desired position with respect to the device/equipment to be installed. Press the parts together to keep the chosen position. Attach the mounting plate onto the mounting bracket with the enclosed screws.

2. Use the enclosed alcohol pad to clean the area where the mount will be installed. Peel off the adhesive tape cover. Hook the angled lower edge under the center console sidewall.

3. Pull the upper part of the mount upward and lift the left edge over the center console frame without touching the frame. Hook the left edge of the mount over the center console frame.

4. The ProClip mount is in place.
