Console mount

1.)

2.)

3.)

4.)

Please read all of the instructions and look at the pictures before attaching the ProClip mount. It is important to install the mount first: any device holder & equipment is to be attached after the mount is in place. This mount consists of two parts: a mounting bracket and a mounting plate. The mounting plate can be attached at any desired angle.

1. Press the thin end of the enclosed gap openers into the gap between the center console frame and the sidewall, to widen the gap. Use the enclosed alcohol pad to clean the area where the mount will be installed. Peel off the adhesive tape cover. Hook the upper edge of the mounting bracket over the center console frame. Press one corner into the gap between the gap openers. Press down on top of the bracket so the edge goes all the way into the gap. Pull out the gap openers.

2. Pull the lower part of the bracket out from the center console without touching the padded sidewall. Press the right part toward the console sidewall and hook the lower edge of the mount under/behind the console sidewall. Press upward on the lower edge so it hooks properly in place.

3. Place the plate on top of the bracket so the holes match, and turn it into desired position with respect to the device/equipment to be installed. Attach the plate onto the bracket with the enclosed screws.

4. The ProClip mount is in place
